About LEVELSHIELD®

LevelShield® is our advanced fuel monitoring solution designed to give operators accurate, real-time visibility into their fuel inventory.

Whether managing fixed tanks, mobile tanks, or delivery fleets, **LevelShield®** provides the insights needed to operate securely, prevent fuel run-outs, and optimize efficiency.

FUEL INVENTORY DASHBOARD

REAL-TIME LEVEL: 22%

FLEET CONSUMPTION ANALYTICS

Seamlessly integrated with our **FuelB4®** platform, **LevelShield®** turns raw tank data into actionable intelligence for smarter decisions and complete accountability.

Because Every Drop Counts

How It Works

1

Smart Probes collect precise tank data including: level, temperature, density and abnormal water levels.

2

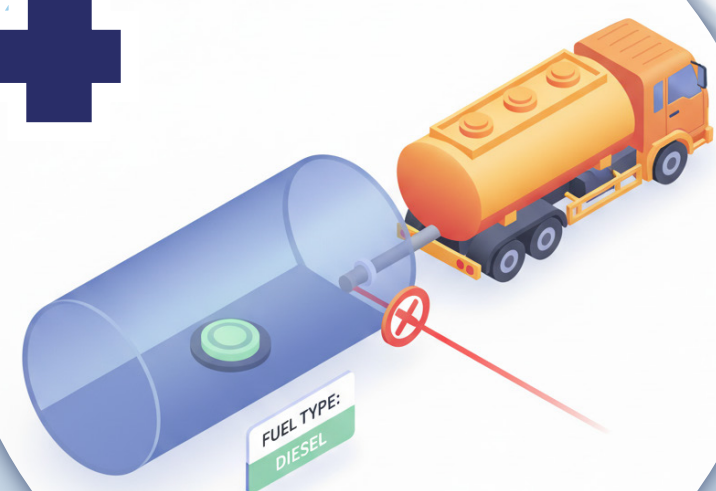

Data is transmitted to **FuelB4®** software through LAN, Wi-Fi, cellular networks, or satellite connectivity.

3

Operators access dashboards, alerts, and reports from any device.

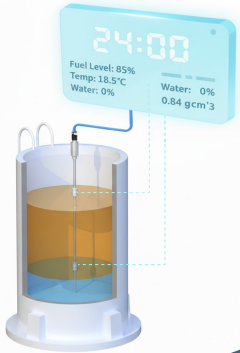

4

Optional Fuel Discriminator prevents mixing in delivery tanks by detecting fuel type in real time.

How It Works

24/7 Real-Time Data:

Monitor fuel levels, temperature, density, and water presence continuously.

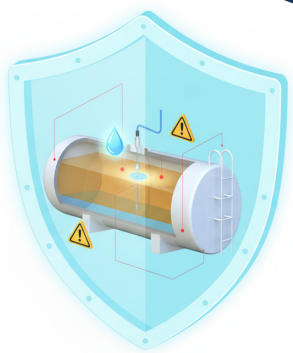

Predictive Alerts:

Track burn rates and receive days-to-empty notifications to prevent costly runouts.

Fuel Reconciliation:

Match purchased vs. dispensed fuel for accurate financial oversight.

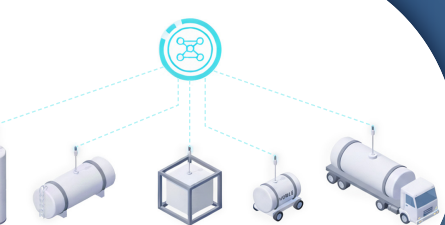

Enhanced Security:

Detect abnormal readings or water contamination early.

User-Friendly Interface:

Multi-user access through **FuelB4®** for collaboration and reporting.

Flexible Compatibility:

Rigid and flexible probes adapt to vertical, horizontal, skid, above-ground, or mobile tanks.

Integration & Scalability

Integrates with third-party tank monitoring systems for unified reporting.

Scales from single tanks to nationwide operations, adapting to your growth.

Syncs with **FuelShield®** for end-to-end control of fuel dispensing and inventory.
